

ABSTRACT

A hydrophilic polyorganosiloxane composition
5 comprising (A) a curable organopolysiloxane containing at
least 5 mol% of diphenylsiloxane units or at least 10 mol% of
methylphenylsiloxane units, (B) a curing agent, and (C) a
specific polyether cures into an elastomeric or gel-like
silicone product having excellent hydrophilic properties and
10 prevents separation of the polyether over time.
